DETAILED ACTION

Allowable Subject Matter

1. Claims 1-2, 4-11, 13-18 and 20 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant invention is drawn to a system operatively connected to a network and method thereof includes a voice quality tester (VQT) to generate a calling signal and an automated voice responder unit (VRU) to receive the calling signal. The autonomous VRU and the VQT include a first task list and a second task list, respectively, allowing the autonomous VRU to synchronize with the VQT and perform a series of voice quality tests of the network without any external I/O control.

Prior art of record failed to teach or fairly suggest in combination an automated voice quality tester system, comprising: a voice quality tester (VQT) generating a calling signal over a network; an automated voice responder unit (VRU), the automated VRU configured as an autonomous VRU without any external I/O control, using a predetermined task list to perform a port setup and a call control and waiting for the calling signal from the VQT across the network under test, and performing functions allowing the VQT server to conduct voice quality tests on the network; and the VQT and the autonomous VRU using an In-band synchronization by passing tone pulses back and forth between the autonomous VRU and the VQT in a prescribed pattern of tone and silence until the autonomous VRU and the VQT are synchronized.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
